

(a) resolved row $U - x$ (FE)
continuous through the layer

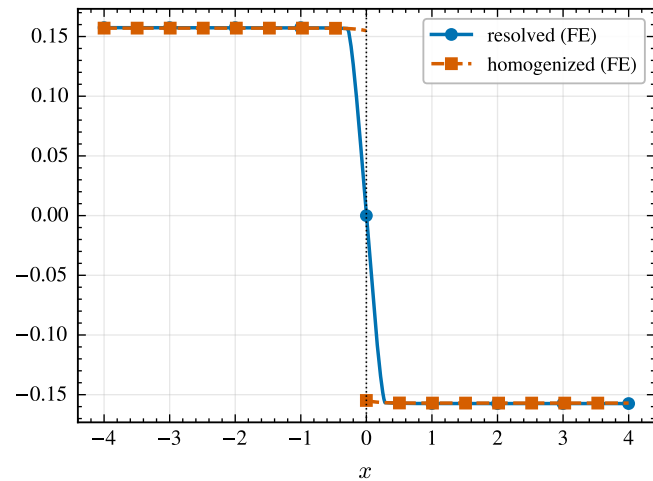

(b) homogenized FE solve $U - x$
matrix + Ventcel jump $[U] = h\mathcal{B}$

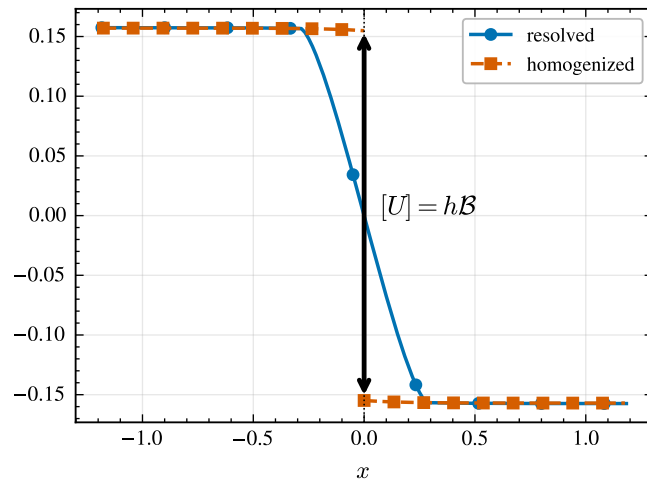

(c) resolved dynamic 45° (FE)
genuinely 2D, $\partial_y U \neq 0$

(d) cut $U - x$ across Γ

(e) zoom: displacement jump $[U]$

(f) jump law: $\mathcal{B}$ vs contrast
